NTFS Permissions Assignment

Student Name: Tania Diaz
 Date: 11/16/2025
 Module: 7
 Description: This assignment demonstrates setting NTFS permissions on a folder for a Local Account.

Step 1: Create a Folder on Desktop

Description:
 Right-clicked on the desktop → New → Folder → Named it NTFS_Test.
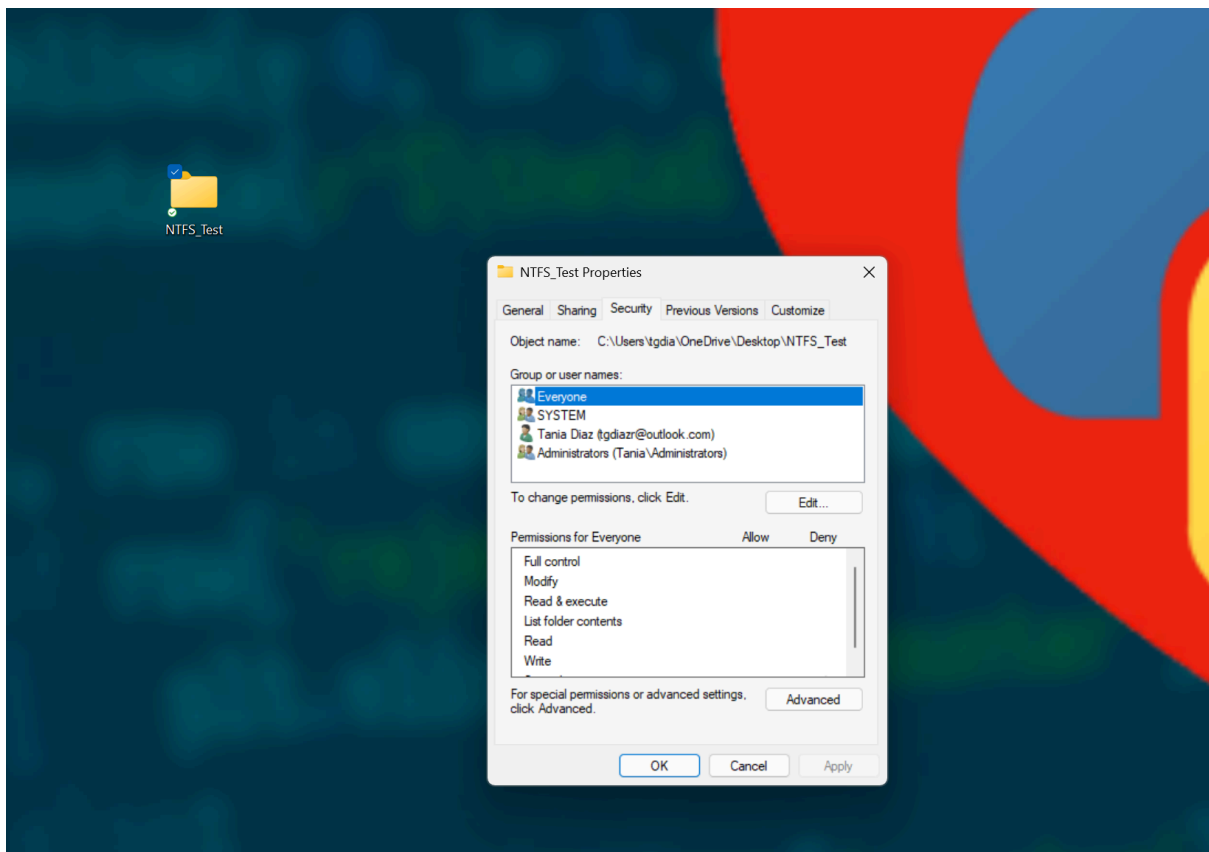

Screenshot:

Step 2: Open Folder Properties

Description:
 Right-clicked on the folder → Properties → Security tab.
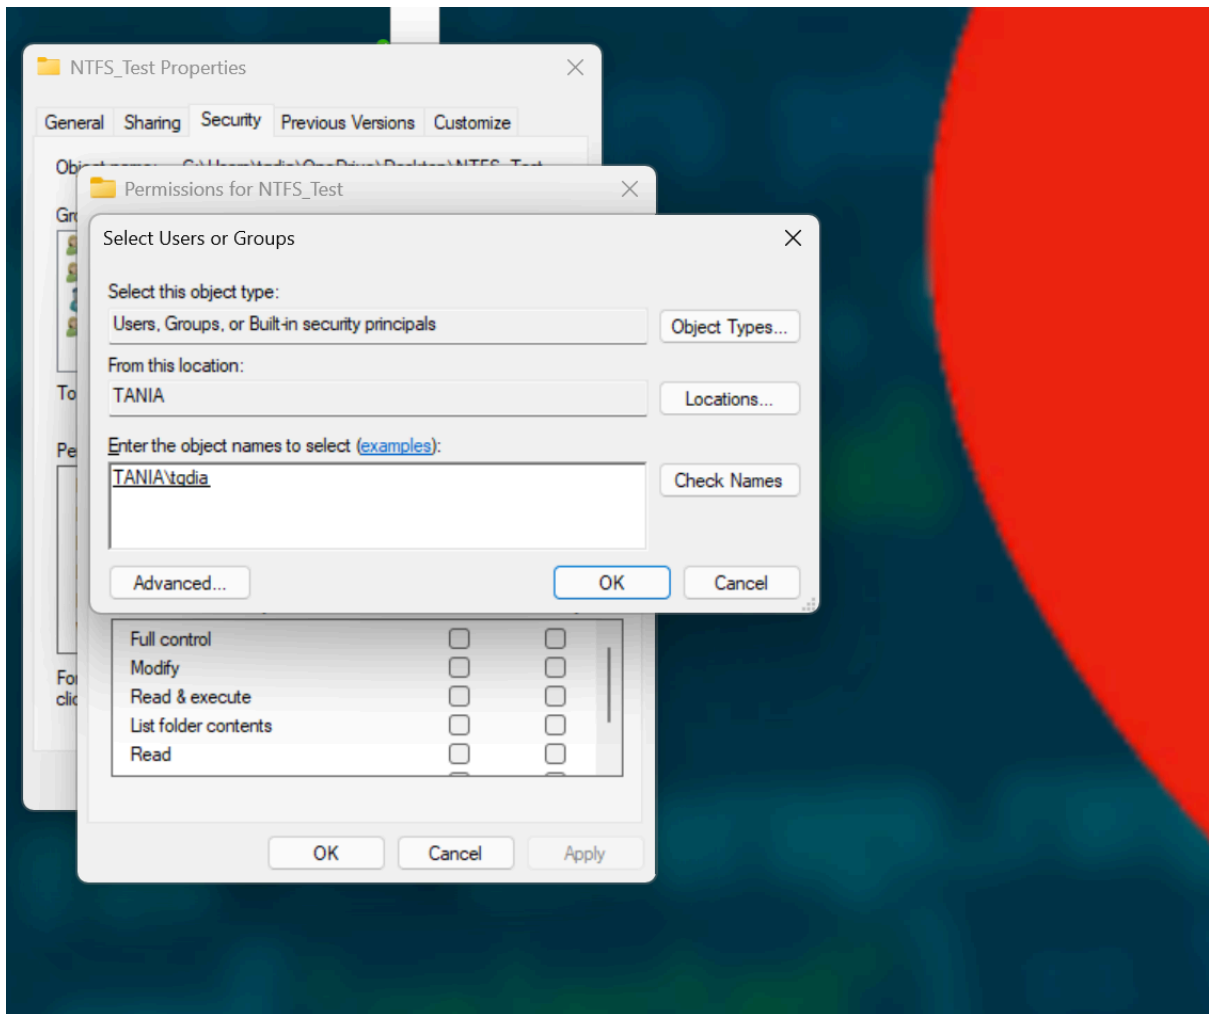

Screenshot:

Step 3: Add Local Account

Description:

- Clicked **Edit** → **Add**.

- Typed the Local Account name and clicked **OK**.
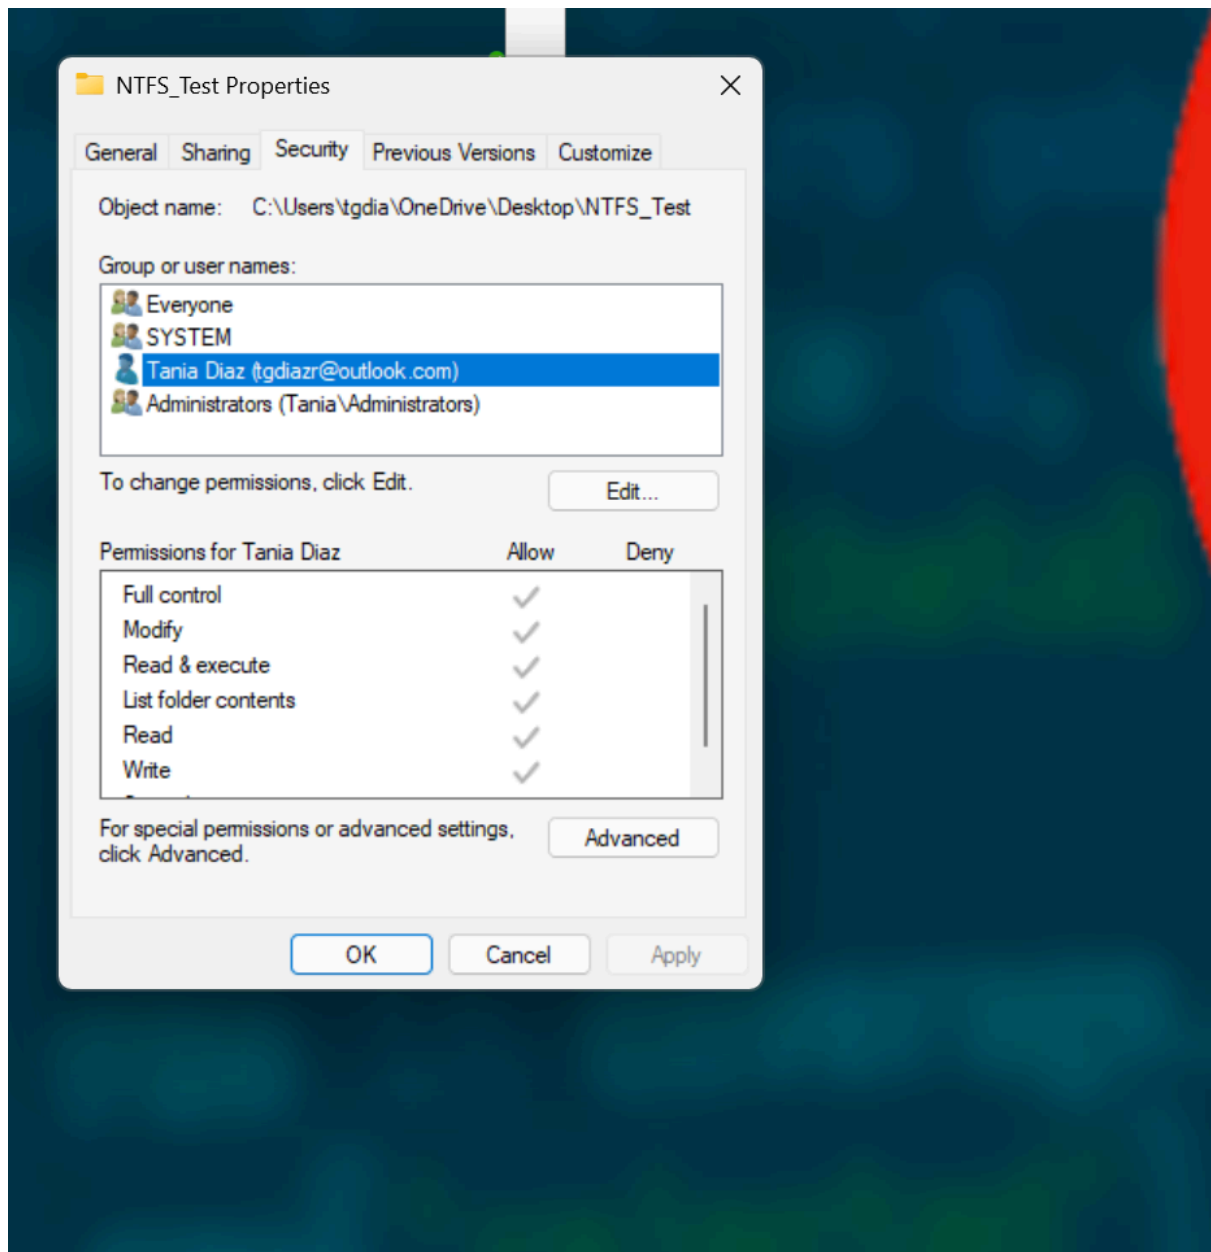

Screenshot:

Step 4: Grant Full Control

Description:

- Selected the Local Account → Checked **Full Control** under permissions.

- Clicked **Apply** → **OK** to save.

Screenshot:

Step 5: Verify Permissions

Description:
 Confirmed the Local Account has Full Control on the folder.

Screenshot:

Step 6: Notes / Observations

- NTFS permissions apply whether the user accesses the folder locally or remotely.

- Giving Full Control allows the account to read, write, modify, and delete files in the folder.

- This process ensures proper security management for sensitive folders on NTFS-formatted drives.
